Optimus Red - Data Logging Occupational Noise Meter

Features

- Meets noise regulations and guidelines
- Class 2 Integrating sound level meter
- Quick and easy to use
- Voice tag recording (audio notes)
- Bluetooth and mobile app
- Single range 20 to 140 dB

Applications

- Occupational noise surveys
- Hearing protection selection
- Noise exposure and dose calculations

Overview

The Optimus Red sound level meter is for measuring sound levels in factories and other work environments in line with the occupational noise regulations.

Let the meter take the strain - The Optimus Red has been designed specifically for occupational noise measurements. Rather than being a general purpose meter that leaves you trying to select the correct measurement range and parameters, the Optimus Red does it all for you, recording all the measurements that you might need now and in the future.

Lower cost meters are available (even within our range), but they may not meet the standards demanded by the regulations and will not be Integrating as required for some occupational noise measurements. They will certainly not be so powerful or easy to use.

Buying the Right Meter

Most occupational noise regulations state that you should use at least a Class 2 Integrating Sound Level Meter that provides you with measurements of LAeq and LPeak. The meter should be verified by a suitably equipped laboratory when new and every year or two years. You also need a Calibrator to check the meter's function before making measurements.

Our Recommendation

For occupational noise measurements with noise exposure calculation we recommend the Noise Measurement Kit CK162B. This includes everything you need for a full occupational noise survey.

Where the noise levels are particularly high, we recommend Optimus Red with Octave Band Filters, which gives the ability to assess the level at the ear when wearing different hearing protectors. See the Optimus with Octave Band Filters page for more information.
