

## doseBadge Industrial Noise Dosimeter

### Features

- Strong metal alloy case
- Shoulder mounted
- Measures noise exposure
- No cables, controls or display

### Applications

- UK noise at work regulations
- Occupational noise surveys
- Factory noise
- Noise dosimetry
- Hearing protection

### Overview

The doseBadge noise dosimeter mounts on a worker's shoulder to measure and store the noise exposure throughout the working day or shift. The doseBadge contains a rechargeable battery, microphone and acoustic processor, all inside a strong metal case that clips on to the worker's clothing or overalls. It is well positioned to measure the noise levels close to the ear.

The doseBadges are controlled using a Reader (included in the CK110/x kits). The Reader communicates with the doseBadge over an infra-red link, like a TV remote control. This means you can mount the doseBadge on the worker and, once you have finished fitting it, start the actual measurement.

The Reader also includes a sound level calibrator to check the function of each doseBadge before use. This is a requirement of the noise at work regulations and HSE guidelines.

### Noise at Work

The doseBadge is designed to measure occupational noise exposure in areas with high sound levels (above 70 dB) to determine whether the noise levels need to be reduced or hearing protection provided.

It has programmable settings to satisfy the occupational noise regulations from around the world as well as satisfying the European and UK noise at work regulations.
